INFO123 AI Project: Marking Guide

Assignment weight: 25% of course grade. **Due:** 16 October 2026, 5pm.

This assignment uses **specification grading**. You earn a **C** by meeting every item on the **Core checklist**. You earn a higher grade (in the B, A, A+ ranges) by additionally meeting items on the **Excellence checklist**.

Important: The size and quality of AI models you use will affect the quality of the AI outputs you will get, and that's okay. We do not penalise the polished quality of AI outputs (image quality, jingle fidelity, website visuals, etc.). We assess what *you did* with the AI: your prompting, session management, selection, iteration, critique, and synthesis. The goal is to reward effective work **with** AI and **reflection about** AI use, regardless of which model you used.

Core checklist: Required to pass (earns C)

All six items must be submitted.

#	Core specification
1	**REQUIRED: Video (.mp4 or .mov file)** plays, is 2–3 minutes, is talking-head format, and contains a business pitch (1 minute max) **and** a personal reflection.
2	**REQUIRED: Chat sessions URLs submitted using the form on Learn**, listing your chat sessions and flagging 2–3 that show your best AI work.
3	**Business plan PDF** submitted, includes content from all 13 task sections, is within the word limits, and contains the required images (market research figure(s), company logo, product packaging, social media ad, process diagram, ERD).
4	**Jingle (.mp3)** submitted, plays, is 15–60 seconds, and relates to your product.
5	**Website URL** submitted via the form on Learn; it loads and shows at least a landing page for your product.
6	**Chatbot URL** loads and answers at least one product-related question (submitted via Learn.

Missing one Core item among #3 to #6 → C- grade.

Missing two Core items among #3 to #6 → D grade.

Missing the Chat sessions URLs → E grade.

Missing the Video → 0/25.

Excellence checklist

For each criterion, the question is: **does your submission demonstrate excellence? does it go far beyond the average expectations?** Each is marked **met / not met**.

#	Criterion	Met when…	Assessed from
1	**Prompting & steering**	At least **2 of your flagged chat sessions** clearly show that you deliberately direct the AI rather than accepting its first output. This means pushing back, critiquing drafts, or asking for specific revisions, and using **advanced prompting & context engineering techniques that go beyond the example prompts in the brief**. This includes personas with specific goals and constraints, tone, style, or format constraints, adversarial reviews, meta-prompting, and carrying context from earlier sessions into later ones.	Chat URLs via the form on Learn (your flagged sessions)
2	**Verification & judgment**	At least **2 of your flagged chat sessions shows you checking or correcting a substantive AI claim against an independent source**. The check must aim to uncover a real error, fabrication, or inconsistency in the AI's outputs. This check must concern factual, data, or business content.	Chat URLs via the form on Learn (your flagged sessions)
3	**Integration**	The business plan reads as **a coherent and integrated document that is ready to present to investors**: not a collage of AI chunks with tone and format shifts. All required images are consistent and embedded in context. Video blends pitch and reflection smoothly.	Business plan + Video/Slides
4	**Working with AI reflection**	Your **Reflection Question 1** (in the video and slides) is clearly and effectively communicated, specific and personal. **You describe lessons learned about your AI workflow, name concrete moments where AI helped or misled you, and say what you would do differently**. Clearly in your own voice.	Video/Slides Part 2 (Q1)
5	**Critical thinking about AI**	Your **Reflection Question 2** (in the video and slides) **clearly and effectively critique the capabilities and limitations of AI**; you tie your reasoning to concrete examples from your own project. **Not generic** ("AI can be biased").	Video/Slides Part 2 (Q2)

How specs map to letter grades

Excellence specs met	Grade band
0	**C** range
1–2	**B** range
3–4	**A** range
5	**A+**

Within each band, the plus/minus (e.g. B−, B, B+) will be assigned based on overall quality and how strongly the specs are met.

Letter Grade → Mark (out of 25)

Grade	Mark /25
A+	23.75 to 25
A	21.75
A−	20.50
B+	19.25
B	18.00
B−	16.75
C+	15.50
C	14.25
C−	13.00
D	11.25
E	7.5

Submission checklist

[ ] **Video file (.mp4 or .mov)** is submitted to Learn (no streaming or OneDrive links).
[ ] All chat session and chatbot/website URLs are tested and submitted via **the Learn form**.
[ ] My business plan PDF embeds all required images and reads as one polished document.
[ ] My video reflection answers Q1 and Q2 with specific, personal examples, and they are not AI-written.
